## Hand Mirror

Requires a 5" round mirror.  
I bought mine at Woodcraft.

These pictures show the effect of the bevel cut.

1/2" Thick

The dashed line is cut with the saw tilted ~10 degrees. This insets the cutout for the mirror. It should inset about 1/8" in depth. The actual angle will vary depending on the blade you use. You should test cut small plugs in the same wood until you get the angle correct.
