When printing this pattern it is important to print it full size. When you bring up the print dialog box look in the "Page Sizing & Handling" section. Make sure the "Actual Size" is selected before you hit print.

You also only need to print the page/s you need. After the print dialog opens look for the "Pages to Print" section. You can print the current page or a range of pages. This will help save ink by not printing the title/instruction pages.

Cutting 1/8" thick plywood on the scroll saw can be tricky. The wood does not provide enough resistance to the blade and the cut can run away from you. Two tricks to make it easier to cut is stack cutting or using a dull blade.

Stack cutting means cutting two or more boards at the same time. Just tape two boards together before you apply the pattern. Now the thicker wood gives more resistance.

Using a dull blade sounds like a bad idea but in this case it actually helps. If you are cutting a single thickness of 1/8" plywood then find an older blade from previous cuts. The dull blade also provides more resistance to the cut.

The angle supports are important for stability.

This is a perfect project for you folks with laser cutters. Remember that I make sure that the pattern pages of the PDF remain vectors. This allows you to import the PDF into Inkscape and export as an svg file for your laser.

Here is a link to a video showing the process.
