General Pattern Information

You may use this pattern to make as many of the project as you like. You are free to use any technique including mass production to build the project. The pattern may be copied and given to others provided the entire book is kept intact. You may not sell the pattern or include it in another commercial package of any type.

Steve Good retains the right to the pattern. If you have any questions about the use of this pattern please contact me at steve@stevedgood.com

When printing this pattern it is important to print it full size. When you bring up the print dialog box look in the “Page Sizing & Handling” section. Make sure the “Actual Size” is selected before you hit print.

You also only need to print the page/s you need. After the print dialog opens look for the “Pages to Print” section. You can print the current page or a range of pages. This will help save ink by not printing the title/instruction pages.

Because of the small size of this project I would call it a moderate difficulty pattern. You will have to cut accurately.

I am using a spruce panel from Home Depot that is .6" thick. You can use .5" or 3/4" thick boards but the height of the basket will be changed.

The pattern on the edge of the board is the angle guide.
We will use it to set the silt of the table.

To set the angle of the cut use the angle guide pattern. Set the angle of the cut by lining up the blade with the upper left and the lower right of the guide. We will make out cuts in the counter clockwise direction.

After you set the angle we will use some scrap wood to make a drill angle guide.

Use the drill angle guide we just cut to help drill the interior hole at the same angle as the saw table is tilted. Drill very carefully. The spacing is small on the small basket. You don't have much room for error.

After you complete the cuts you will be ready to stack the basket in the correct order.

You will flip every other ring to stack the basket.
As you flip the rings you can glue them together.
Do not glue on the upper ring until the slats are installed.

We will size the slats by installing and marking the length. For the small basket the slats will be .1" thick and .5" wide. Adjust the slats for the larger basket.

The slats will be two different lengths as seen in the image below.

There will be a total of 18 slats.

With the top ring off, install and glue the short slats.

When you install the long slats you may need to install and glue one side and one end then install the upper ring before installing and glueing the rest of the long slats.

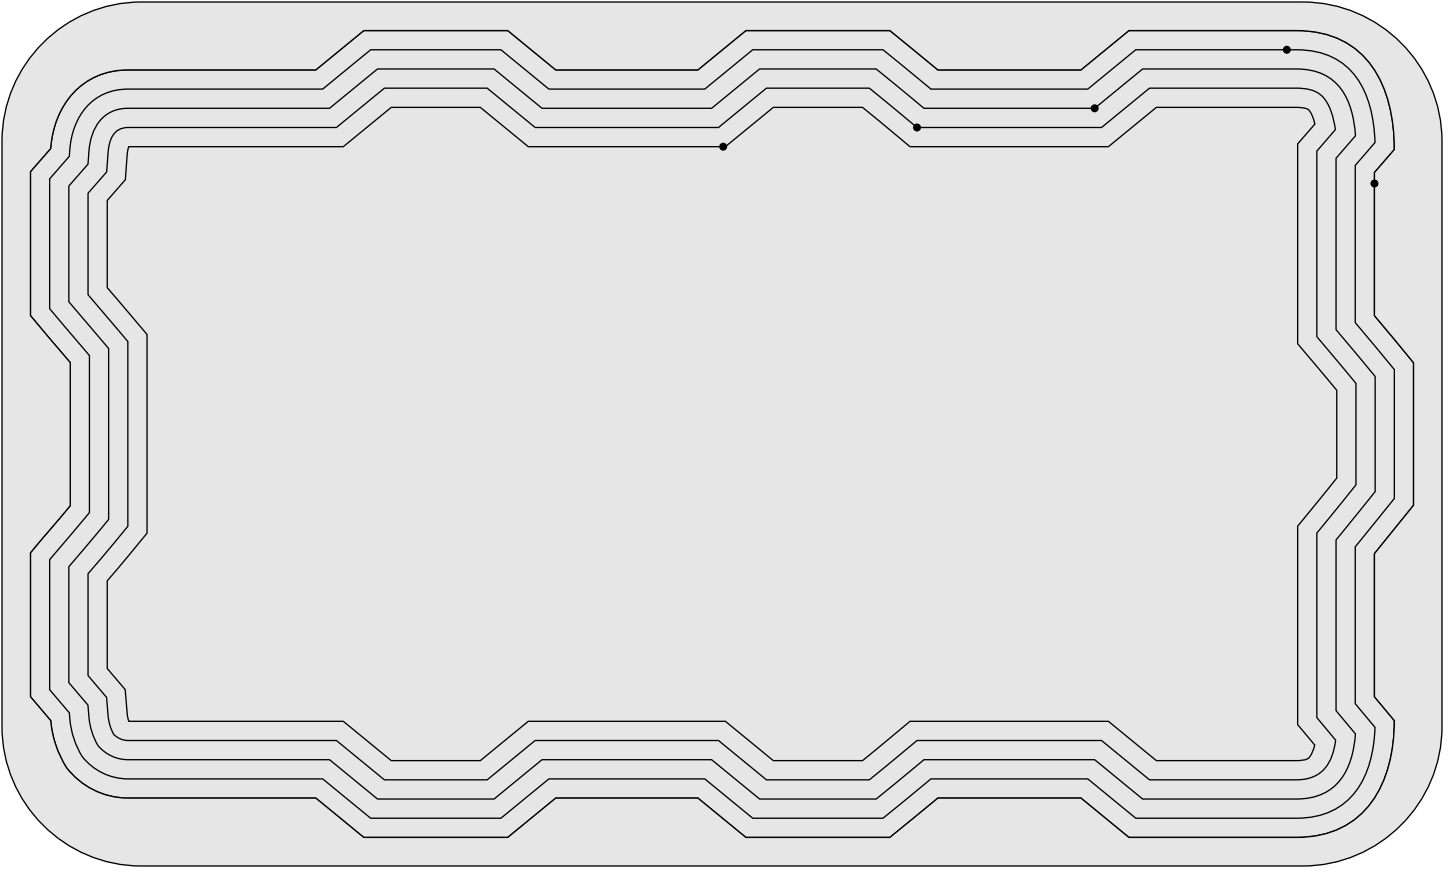

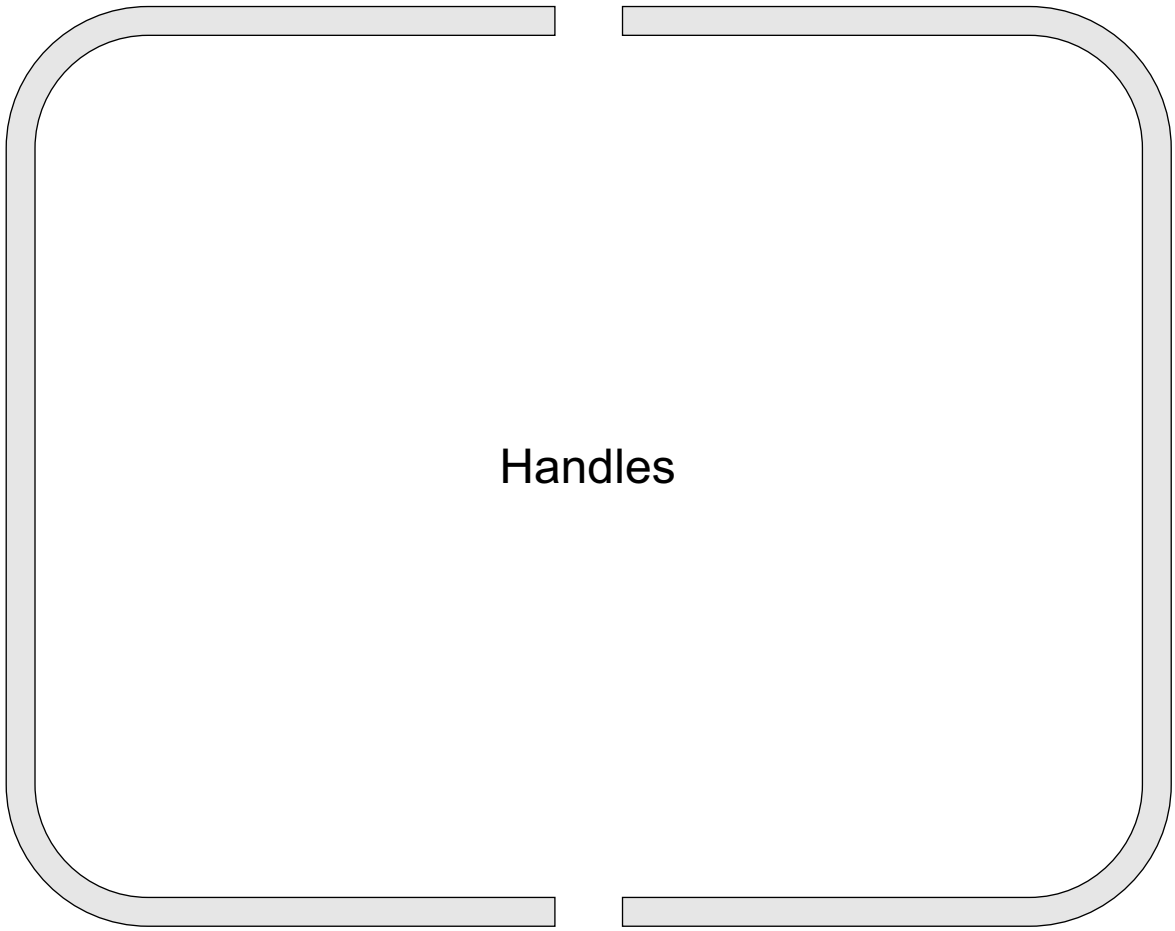

Glue on the upper ring.

Drill the holes for the handles. You can use one or two handles. Drill holes for the wooden dowels that will hold the handles in place.

Install the handles.
